New polynucleotides and polypeptides encoded by the polynucleotides isolated from skin cells, useful for treating skin wounds, cancers, growth and developmental defects, inflammatory diseases, or for modulating immune responses

Claim 1; Page 262; 466pp; English.

The present invention provides the protein and coding sequences of cDNAs isolated from human, murine and rat skin cell libraries. The sequences can be used in the development of therapeutic agents useful in the treatment of skin diseases, including skin wounds, cancer, growth defects, developmental defects and inflammatory diseases. The proteins have important roles in the induction of hair growth, cell proliferation and cell-cell interaction, in maintaining tissue integrity, in wound have important modulating immune responses. The present sequence is a new large that in modulating immune responses. The present sequence is a invention.

Novel polynucleotides useful for including wounds and cancer -Claim 1; Page invention relates English. the treatment of various conditions

dermal papilla, human keratinocytes and neonatal foreskin fibroblasts, cc and mouse embryonic skin, keratinocytes tem cells and transit amplifying cc cells. Polypeptides of the invention may be used to treat inflammation, cc cancer and neurological diseases. The proteins may be used to stimulate cc the growth and motility of keratinocytes, to inhibit the growth of cc cancer cells, to modulate angiogenesis and tumour vascularisation, to modulate skin inflammation, to modulate epithelial cell growth and to cc inhibit binding of HIV-1 to leukocytes. The invention may also be used cc inhibit binding of HIV-1 to leukocytes. The invention may also be used cc disorders. Sequences AAZ61606-Z61832 represent cDNA sequences derived cc from several mouse, rat or human skin cell types. Sequences aZ61606-Z61606-Z61602-Z61811 and AAZ61826 encode cc proteins with an N-terminal signal sequence, indicating that the proteins can daZ61827-Z61819 encode proteins with a N-terminal signal sequence, indicating that the proteins and AAZ61827-Z61819 encode proteins with one or more putative transmembrane domains. to novel nucleic acid sequences derived from rat keratinocytes and neonatal foreskin fibroblasts, kin, keratinocyte stem cells and transit amplifying

Sequence 1123 BP; 277 A; 266 C; 321 G; 258 T; 1 other;

and mouse embryonic skin, keratinocyte stem cells and transit amplifying cells. Polypeptides of the invention may be used to treat inflammation, cancer and neurological diseases. The proteins may be used to stimulate the growth and motility of keratinocytes, to inhibit the growth of cancer cells, to modulate angiogenesis and tumour vascularisation, to modulate skin inflammation, to modulate epithelial cell growth and to

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

* NOTE: This is a 'working draft' sequence. It currently
* consists of 2 contigs. Gaps between the contigs
* are represented as runs-of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submittor.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.
